

COVID-19 Deaths by Vaccination Status

Updated: March 28, 2022

This reports aims to show the levels of protection against deaths related to COVID-19 based on vaccination status. This report shows deaths by vaccination status starting August 2021 because additional/booster doses became available starting that time.

	Number	Rate (per 100,000)
Total Deaths from August 2021 to present	311	115.3
Unvaccinated	208	182.7
Fully Vaccinated	82	52.6
Fully Vaccinated with Booster	21	13.5

From August 2021 to present there have been 311 deaths. The cumulative incidence rate for the unvaccinated deaths is 182.7 per 100,000 unvaccinated persons, which is **3.5X** greater than the incidence rate of Fully Vaccinated deaths and **13.5X** greater than the incidence rate of Fully Vaccinated with Booster deaths.

Unvaccinated people have:

- **3.5X** Risk of Dying from COVID-19 compared to people fully vaccinated (with at least a primary series)
- 13.5X Risk of Dying from COVID-19 compared to people fully vaccinated and boosted
